

ICUR2022
2nd International Conference
on Urban Risks

Session on

Risk and emergency management

The International Conference on Urban Risks (ICUR) will serve as an international forum at which specialists in urban risks and stakeholders may exchange the latest research results and methodologies. The aim of the conference is to provide a platform for researchers and practitioners, from a broad range of disciplines, to collaborate in the reduction of the impact of climate change and natural and technological hazards on urban societies.

This session aims at addressing issues related with risk and emergency management, covering both conceptual and operational perspectives as well as applications. It is an opportunity to debate and discuss issues, difficulties and opportunities in the application of risk management in different areas as well as issues related to emergency management. The integration of risk management and emergency management, often addressed by parallel approaches, is also a central topic of this session.

Specific topics may include, but are not limited to:

- Risk management frameworks and methods;
- Risk and resilience;
- Integrating risk and emergency management;
- Emergency management;
- Risk and emergency management standards and guidelines;
- Managing multiple risks;
- Use of new/disruptive technologies;
- Risk and emergency governance;
- Good practices and lessons learned.

We invite you to submit an extended abstract for this session. Please submit your abstract through the conference website, selecting the topic corresponding to this special session.

Conveners:

Maria do Céu Almeida

National Laboratory of Civil Engineering (LNEC)
Lisbon, Portugal

Georgios Tsionis

European Commission, Joint Research Centre (JRC)
Ispra, Italy
